weighing up to 1,000 lbs.*

- Units are 22¼" wide x 26" high
- All steel welded construction
- Each set weighs only 23½ lbs.
- Sold two units per set

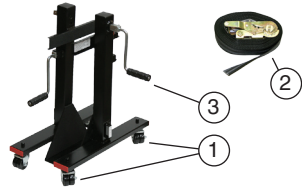

# No. 2822 Lift-N-Move with Load Binder

Used in sets, the Lift-N-Move easily moves refrigerators, washers, dryers, loaded filing cabinets and other heavy items weighing up to 1,000 lbs. Only one person is needed to use, saving unnecessary extra labor cost. Also, the Lift-N-Move eliminates the danger of muscle strain or back injury. Units function in tight places, needing only 8" wall clearance per side to place into the lift position when using the Removable Handle. For areas with as little as 4" wall clearance per side, an adjustable wrench can be used (in place of the Removable Handle) to raise or lower the load.

## Assembly Instructions

The Lift-N-Move ships with the following parts items, also available separately:

Key	Item Number	Qty. Used	Description
1	2822-DC	4 each	Dual Caster
2	2822-LBS25	1 each	2" W x 25' L Load Binder Strap
3	2822-RH	2 each	Removable Handle

The Dual Casters are a stem type dual wheel swivel caster with ball bearings that pops into the sockets of each Lift-N-Move unit. Each unit also has a storage position for the Removable Handle. The 2" wide x 25' long nylon Load Binder Strap has an attached ratchet mechanism. It is used by threading the strap end through the 'Strap Loop' of each unit and then tightening the strap using the ratchet to secure the load.

## Operating Instructions

To operate, simply insert the lip of each unit under both sides of the object to be moved. Little, or no tilting is necessary. Secure the load with the Load Binder Strap through the bottom Strap Loop in each unit, then turn the handles clockwise to evenly pick up the load. Properly secured, the Lift-N-Move rolls freely on the four 2" casters.

For appliances or furniture with short legs, turn the handles clockwise until the lip of the Lift-N-Move comes in contact with the item being moved.

## CAUTION

- The Load Binder Strap must be used to properly secure the load before moving.
- Be sure there is enough overhead clearance above the item to be moved before raising it.
- The Lift-N-Move is designed for use on level surfaces only. **DO NOT** use on stairs, over curbs or outdoors.
- Newly installed floors may be marked, torn or crushed by the caster wheels of the Lift-N-Move. Use a sufficient support surface over the floor to prevent this damage.
